Medical vs. Non-Medical Cannabis

Simple Answer:

SAME PLANT

NO DIFFERENCE

BUT....

Price

Strains

Dosage

Administration Methods

Barriers to Access of Medical Marijuana

- ▶ Lack of MD knowledge/training on medical cannabis.
- ▶ Lack of information/guidelines on dosages and indications of use of different strains - fear of being reprimanded for prescribing cannabis.
- ▶ Patient reluctance to discuss with doctor.
- ▶ Cost of supply from licensed producers - requirement to smoke/vaporize dry cannabis.
- ▶ “Illegal” dispensaries with compassion clubs - edibles, oils, tinctures, creams at dispensaries.

MCRCI and other clinics like us assist seniors by:

- ▶ - intake process/consult to determine appropriateness of medical cannabis for treatment
- ▶ - arranging meeting with qualified practitioner with expertise in cannabis and cannabis-derived medicines;
- ▶ - guiding them through process of becoming legal medical users;
- ▶ - providing information and advice and ongoing support and follow-up on marijuana as medicine;
- ▶ - assisting patients in choosing a legal source of medical grade marijuana.
- ▶ - MCRCI completes and forwards documentation to patient's preferred licensed producer
