March 8, 2016

To: Whom it may concern

Hello there, my name is Wayne Dahl, and I'm the manager here at Abbey Medical Supplies. Thank you for taking the time to consider our bid for wheelchairs and cushions.

A little about us, we have been in business for 32 years, my father started the company out of our home, he is a paraplegic himself, and was tired of going into Vancouver and getting his supplies. He had other friends who felt the same, so he started to bring in the supplies they needed, and the company just started to grow.

We have one large location with over 8000 sq ft of show room and retail space, and have been in this location for 25 years. We service from Vancouver to Hope, and have 8 service people who can look after the wheelchairs and cushions that you purchase from us.

As stated, for chairs purchased, there will be a one time free setup charge for the first client, but after that, there will be a \$50 per chair charge. The warranty will depend on the chair but will be either 2 or 3 years, and we will come out twice a year to go over all the chairs as part as the warranty.

We will honor our quote until Dec 31/2016. Our MDEL # is 987.

If you like we would love to be able to show you each of the chairs and cushions, so you can make an informed decision, also we could listen to your needs, and figure out what combination of chairs and cushions might work for you best, so that you can get the best use out of your funds.

Thank you,

Wayne Dahl

MOTION
COMPOSITES

Something had to be done. We did it.

Motion Composites believes in empowering wheelchair users. Why? Because clunky and inefficient equipment is unfortunately too common. Which means you're less mobile and less efficient than you could be — and should be.

So we did something about it. We use the world's most advanced technologies to enhance people's mobility and improve their lives.

We began with a simple premise: light, rigid, adjustable and reliable devices produce better mobility. The success of our Helio and Veloce wheelchairs proved our point and paved the way for our next move... aptly named the Move wheelchair. It's simply the lightest, most efficient standard wheelchair available anywhere.

According to conventional wisdom, standard wheelchairs offer affordable mobility but often at the expense of quality. The Move is made with robust parts and high quality components for durability and performance.

It's your Move.

MOVE

Now it's your move!

When we sat down to create the Move, we began with our usual accept-no-compromises goal — to build the lightest, most efficient wheelchair in its category. Period. It offers the design ingenuity you'd expect from Motion Composites. And it adds something new — accessibility. We are proud to bring Motion Composites superb quality to the standard wheelchair category.

Simple. Light. Tough.

We designed the Move for lightness and simplicity. Innovative engineering and lightweight accessories have enabled us to create the lightest standard wheelchair on the market. And, because we want to maintain a lightweight package, we offer Newton One spoke wheels standard on every Move.

The lowest seat-to-floor height.

The Move's innovative frame design lets you achieve a super low 12 ½" (31.8 cm) front seat-to-floor height with a 4" caster on a standard frame. That's the same frame that can go up to 20 ½" (52 cm)!

Premium accessories.

Expect more from the Move. High quality, durable accessories include our Flip-Back Convertible Armrests, integrated push handles and Newton One spoke wheels. They make the Move your smartest choice in the standard wheelchair category.

Truly innovative armrest.

Our composites lightweight armrest quickly converts from flip-back to single post for easier configuration.

Height adjustments are just a flick away thanks to a simple trigger system. On top of this, experience safer transfers with our enhanced rubber grip finish.

Integrated push handles for added strength and durability

New injected plastic crossbrace links are lighter and more durable

Rigid Unibody Frame eliminates joints, reduces movement and maximizes efficiency

Eliminating the need for both hemi and standard frame, the hybrid frame design offers a complete range of seat-to-floor heights

Ultrarigid Folding System offers best-in-class propulsion efficiency

Rigid Unibody Frame — A unibody frame is much stronger and needs less maintenance than a standard two-part frame. It also reduces weight while maximizing propulsion efficiency.

Ultrarigid Folding System — High-precision tolerances and oversized pivot axles for best-in-class propulsion efficiency.

Vertical Axleplate — Offers two center of gravity positions, both in front of the back post, for optimal efficiency. Vertical mounting maximizes rigidity and responsiveness.

Flip-back Convertible Armrest — Easy to adjust and made of composite material for strength and reduced weight. The only armrest that converts from flip-back to single post without the use of tools.

Newton Accessories — Parts and accessories designed to be lighter, with improved functionality and awesome style.

Technical Specifications

Structure

Frame	Folding with aluminum crossbrace
Material	Aluminum alloy
Weight	16 lbs. (7.25 kg) (w/o rear wheels & footrest)
Weight capacity	250 lbs. (113 kg) Kit HD: 350 lbs. (159 kg)
